DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claim 33 is rejected under 35 U.S.C. 102(e) as being clearly anticipated by Irving et al (US 6,242,166).

See the compound in column 41 labeled D-28. This compound reads on the instant claim that has the following definitions:

R₆= alkyl, R₇, R₈, R₅ = hydrogen, Z=NR₂R₃ where R₂ and R₃ = alkyl; t=0, R₁₂ = hydrogen and W equals a divalent substituent comprising SO₂.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 33 is rejected under 35 U.S.C. 103(a) as being unpatentable over Irving et al (US 6,242,166).

Irving et al substantially discloses the claimed invention. Irving in column 27 lines 40-67 and column 28 lines 1-25 discloses a genus which is broader than the instant claimed genus,

but which has substantial overlapping subject matter. The genus of Irving et al is almost identical to the instant claimed genus when the variable is defined as $-SO_2-$. Some of the examples in Irving specifically used this variable. For example, the compound indicated in the 102 rejection given above.

It would have been obvious to one having ordinary skill in the art at the time that applicant's invention was made to have made the compounds as instantly claimed since the instant claimed invention is subgeneric to the genus disclosed in Irving et al. A skilled artisan would have been motivated to make species embraced by the genus of Irving et al with a reasonable expectation that the species would be useful as blocked developing agents.
